

Introduction

The ProAct Prescription Drug List references the most commonly prescribed medications available to treat a variety of conditions. The medications are placed into levels known as “tiers” that will determine what the cost share will be for the member (see below).

Tier 1 = generic medications

Tier 2 = preferred or formulary brand medications

Tier 3 = non-preferred or non-formulary medications

This is not an all-inclusive list as there may be prescription drug products that do not appear. Generic medications not listed will be considered Tier 1, while brand name medications not listed are considered Tier 3. A medication may move to a lower tier at any time, while a brand name medication may move to a higher tier when a generic becomes available. On a quarterly basis, updates can be made to the formulary which may result in a medication being moved to new tier resulting in a change to the copay. For medication-specific questions please contact the ProAct helpdesk at 1-877-635-9545.

Medications

Drugs are listed according to their therapeutic category or drug class. To distinguish between generic and brand medications, generic drugs will be listed in plain type while **brand medications will be in bold**. It is important to realize that even though a medication may be listed in this document, plan benefits override this drug listing. Therefore it is possible there may be items included on this list that are excluded or subject to other coverage guidelines. For questions regarding specific medications or therapeutic categories please contact the ProAct helpdesk at 1-877-635-9545.

Specialty Medications (SP)

This formulary document also includes specialty medications. Specialty medications (SP) can be described as drugs that are high cost, highly complex, or typically require specialized administration, handling, or distribution. They are often biology-based and mimic substances found in the body to produce their effects. These medications may process differently depending on your plan design and may require prior authorization and/or have other restrictions.

Utilization Management Programs (AR, GR, QL, PA, ST)

Some prescription plans may implement other programs that may dictate how medications will process. These include age restriction (AR), gender restriction (GR), quantity limit (QL), prior authorization (PA), and/or step therapy (ST) programs. If a particular medication is subject to these programs the abbreviation for that program will appear under the notes section for the particular product. For more information on whether or not your plan participates with these programs, or how these programs may affect the medications you are using please contact the ProAct helpdesk.

Please note: some plans may not utilize one of more of these (AR, GR, QL, PA, ST) programs. In the case where the plan does not use the program, the medication will not be subject to the terms of that particular program regardless of what is listed in the Notes column.
